Power Devices

MUR-840, MUR-850, MUR-860

JEDEC TO-220AC

## 8-A, High Speed, High Voltage, High Efficiency Epitaxial Silicon Rectifiers

## Features:

- Ultra fast recovery time (< 50 ns)
- Low forward voltage
- Low thermal resistance
- Hard glass passivation
- Wire-bonded construction

## Applications:

- General Purpose
- Power switching circuits to 100 kHz
- Output rectification in switching power supplies

The RCA MUR-840, MUR-850, and MUR-860\* are low forward voltage drop ultra fast-recovery rectifiers ( $t_{rr} < 50$  ns). They use a glass passivated ion-implanted epitaxial construction.

These devices are intended for use as output rectifiers and fly wheel diodes in a variety of high-frequency pulse-width modulated and switching regulators. Their low stored

charge and attendant fast reverse-recovery behavior minimize electrical noise generation and in many circuits markedly reduce the turn-on dissipation of the associated power switching transistors.

All are supplied in TO-220AC plastic packages.

\* Formerly RCA Dev. No. TA9616.

### SWITCHMODE POWER RECTIFIERS

... designed for use in switching power supplies, inverters and as free wheeling diodes, these state-of-the-art devices have the following features:

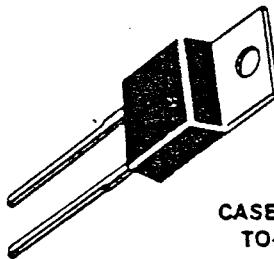

- Ultrafast 25, 50 and 75 Nanosecond Recovery Time
- 175°C Operating Junction Temperature
- Popular TO-220 Package
- Epoxy meets UL94, VO @  $\frac{1}{8}$ "
- Low Forward Voltage
- Low Leakage Current
- High Temperature Glass Passivated Junction
- Reverse Voltage to 1000 Volts
