

ZTX749

PNP Silicon Planar Medium Power Transistor

FEATURES

- 1.5W power dissipation at $T_{amb} = 25^{\circ}\text{C}$ §
- 2A continuous I_C
- Excellent gain characteristics up to 6A (pulsed)
- Low saturation voltages
- Fast switching
- NPN complementary type available

PLASTIC E-LINE (TO-92)

DESCRIPTION

A high performance transistor encapsulated in the popular E-line (TO-92) plastic package.

The 1.5W performance and outstanding electrical characteristics permit use in a wide range of industrial and consumer applications including lamp and solenoid drivers.

In addition the excellent gain characteristics at high collector current levels make the device ideal in pulsed applications.

The specially selected SILICONE encapsulation provides resistance to severe environments comparable with metal can devices.

Complementary to the ZTX649

PNP Silicon Planar Medium Power High Voltage Transistors

FEATURES

- 1W power dissipation at $T_{amb} = 25^{\circ}\text{C}$
- Excellent gain characteristics at $I_C = 100\text{mA}$
- Voltages up to 300 volts
- Low saturation voltages
- Complementary types

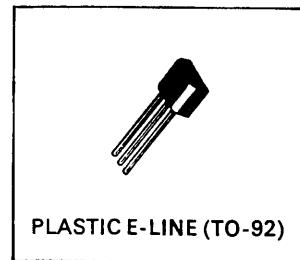

DESCRIPTION

These plastic encapsulated, medium power transistors are designed for applications requiring high breakdown voltages and low saturation voltages.

The E-line package is formed by injection moulding a SILICONE plastic specially selected to provide a rugged one-piece encapsulation resistant to severe environments and allow the high junction temperature operation normally associated with metal can devices.

E-line encapsulated devices are approved for use in military, industrial and professional equipments.

Alternative lead configurations are available as plug-in replacements of TO-5/39 and TO-18 metal can types, and for flat mounting. Also available on tape for automatic handling.
