

CA758E**RC Phase-Locked-Loop Stereo Decoder**

For FM Multiplex Systems

RCA-CA758E is a monolithic silicon integrated circuit RC phase-lock loop stereo decoder intended for FM solid-state stereo multiplex systems.

The CA758E is pin compatible and electrically equivalent to industry types μ A758, MC1311P, LM1800, and ULX2244.

The CA758E decodes the multiplexed stereo input signal into left and right channel audio output signals. The decoder also suppresses SCA (storecast) transmissions when present in the composite stereo signal.

- Low distortion (THD): 0.4% (typ.)
- Excellent SCA rejection: 70 dB typ.
- RC oscillator
- High-audio-channel separation: 45 dB
- Power supply range: 10 to 16 V dc
- Requires only one adjustment for complete alignment
- Low-impedance outputs
- Stereo indicator lamp drive: 150 mA typ.

The decoder uses a minimum of external components, and requires one adjustment (oscillator frequency) for complete alignment. In addition, the CA758E provides automatic mono-stereo mode switching and energizes a stereo indicator lamp. The CA758E is supplied in a 16-lead dual-in-line plastic package and operates over an ambient temperature range of -40 to +85 $^\circ\text{C}$.
