

5 DEVICES COVER COMMERCIAL,  
INDUSTRIAL, AND MILITARY  
TEMPERATURE RANGES

- Very Low, Adjustable ("Programmable") Power Consumption
- Adjustable Supply Current . . . 5  $\mu$ A to 200  $\mu$ A
- Very Low Input Bias and Offset Currents
- Wide Supply Range . . .  $\pm 1.2$  V to  $\pm 18$  V
- Wide Common-Mode and Differential Voltage Range
- Output Short-Circuit Protection
- High Input Impedance . . . JFET-Input Stage
- Unity-Gain Bandwidth . . . 1 MHz Typ (100 kHz at 25  $\mu$ W)
- High Slew Rate . . . 3.5 V/ $\mu$ s Typ
- Internal Frequency Compensation
- Latch-Up-Free Operation

## description

The TL066, TL066A, and TL066B are JFET-input operational amplifiers similar to the TL061 with the additional feature of being power-adjustable. They feature very low input offset and bias currents, high input impedance, wide bandwidth, and high slew rate. The power-control feature permits the amplifiers to be adjusted to require as little as 25 microwatts of power. This type of amplifier, which provides for changing several characteristics by varying one external element, is sometimes referred to as being "programmable." The JFET-input stage combined with the adjustable-low-power feature results in superior bandwidth and slew rate performance compared to low-power bipolar-input devices.

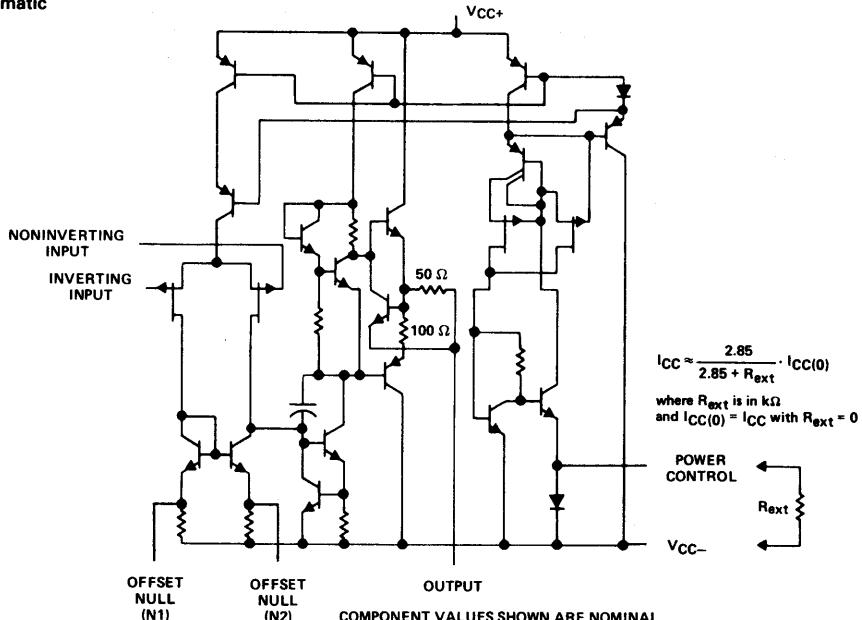

The TL066M is characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ; the TL066I is characterized for operation from  $-25^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ ; the TL066C, TL066AC, and TL066BC are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

## symbol

# TYPES TL066M, TL066I, TL066C, TL066AC, TL066BC ADJUSTABLE LOW-POWER JFET-INPUT OPERATIONAL AMPLIFIERS

schematic

$$I_{CC} \approx \frac{2.85}{2.85 + R_{ext}} \cdot I_{CC(0)}$$

where  $R_{ext}$  is in k $\Omega$   
and  $I_{CC(0)} = I_{CC}$  with  $R_{ext} = 0$

## absolute maximum ratings over operating free-air temperature (unless otherwise noted)

	TL066M	TL066I	TL066C TL066AC TL066BC	UNIT
Supply voltage, $V_{CC+}$ (see Note 1)	18	18	18	V
Supply voltage, $V_{CC-}$ (see Note 1)	-18	-18	-18	V
Differential input voltage (see Note 2)	$\pm 30$	$\pm 30$	$\pm 30$	V
Input voltage (see Notes 1 and 3)	$\pm 15$	$\pm 15$	$\pm 15$	V
Voltage between power-control terminal and $V_{CC-}$	$\pm 0.5$	$\pm 0.5$	$\pm 0.5$	V
Duration of output short circuit (see Note 4)	unlimited	unlimited	unlimited	
Continuous total dissipation at (or below) 25°C free-air temperature (see Note 5)	680	680	680	mW
Operating free-air temperature range	-55 to 125	-25 to 85	0 to 70	°C
Storage temperature range	-65 to 150	-65 to 150	-65 to 150	°C
Lead temperature 1.6 mm (1/16 inch) from case for 60 seconds	FH, FK, or JG package	300	300	°C
Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds	D or P package	260	260	°C

- NOTES: 1. All voltage values, except differential voltages, are with respect to the midpoint between  $V_{CC+}$  and  $V_{CC-}$ .  
 2. Differential voltages are at the noninverting input terminal with respect to the inverting input terminal.  
 3. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15 volts, whichever is less.  
 4. The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.  
 5. For operation above 25°C free-air temperature, refer to Dissipation Derating Curves in Section 2. In the JG package, the TL066I, TL066C, TL066AC, and TL066BC chips are glass-mounted; the TL066M chips are alloy-mounted.

<sup>†</sup> All characteristics are measured under open-loop conditions with zero common-mode input voltage unless otherwise specified. Full range of  $T_A$  is  $-55^\circ\text{C}$  to  $125^\circ\text{C}$  for TL066M;  $-25^\circ\text{C}$  to  $85^\circ\text{C}$  for TL066I, and  $0^\circ\text{C}$  to  $70^\circ\text{C}$  for TL066C. The electrical parameters are measured with the power-control terminal (pin 8) connected to  $|V_C - |$ .

<sup>‡</sup> Input bias currents of a FET-input operational amplifier are normal junction reverse currents, which are temperature-sensitive. Pulse techniques must be used that will maintain the junction temperature as close to the ambient temperature as possible.
